

DRAFT  
**INTEGRATED TRANSPORT  
STRATEGY**

## How to provide feedback

This draft *Integrated Transport Strategy* has been released for community feedback and participation in the future planning of our City.

Your feedback on this draft *Strategy* is actively sought until Monday 26 March 2018. Submissions can be made:

- online: [www.gleneira.vic.gov.au/transport](http://www.gleneira.vic.gov.au/transport);
- via email: [cityfutures@gleneira.vic.gov.au](mailto:cityfutures@gleneira.vic.gov.au);
- via post: City Futures Department, PO Box 42, Caulfield South 3162; or
- contact Council's City Futures Department on 9524 3333.

## INTRODUCTION

### WHAT IS THE PURPOSE OF THIS STRATEGY?

Glen Eira is forecast to grow by 22,000 people, 9,000 dwellings and 9,500 jobs over the next 15 years. This draft *Integrated Transport Strategy* aims to set our priorities for transport, aligned with our 15-year vision for the future of transport in Glen Eira.

This draft *Strategy* intends to:

- > provide the strategic context to update Council’s *Municipal Strategic Statement*;
- > provide a planning policy link between the *Glen Eira Council and Community Plan 2017–2021* and State Government’s *Plan Melbourne*;
- > guide strategic context for future structure plans;
- > provide clear policy direction for the municipality;
- > replace existing Council strategies (*Sustainable Transport Strategy*, *Walking Strategy* and *Cycling Strategy*); and
- > provide direction for upcoming strategies (see diagram below).

Transport will be central to achieving Council's broader policy direction as outlined in Council's *Glen Eira Council and Community Plan*:

### 1. Liveable and well designed

We are committed to Glen Eira being a well designed City that is safe attractive and vibrant for our residents and businesses.

### 2. Accessible and well connected

Aspire to create neighbourhoods where people can access, the goods and services they need, within 20 minutes of where they live, travelling by foot, bicycle or public transport.

### 3. Safe, healthy and inclusive

We are committed to being a community that is safe, healthy and inclusive. Our aim is to help people feel socially included, with access to quality support services. We will build a social environment that encourages participation, where people feel safe in their homes and around our streets.

To enable us to make better use of our existing infrastructure, we need to support a range of travel options for each journey.

Encouraging and facilitating active travel and public transport options will be the key to reducing unnecessary car trips. The benefits of this are:

- > freeing up road space and parking for those who need to use it;
- > reduce congestion and improve safety for children, particularly around schools and activity centres;
- > increased productivity with less time spent in traffic; and
- > improve health and wellbeing through active travel modes.

## HOW WAS THIS STRATEGY DEVELOPED?

This *Strategy* has been informed by extensive community feedback, including 89 submissions on our *Integrated Transport Strategy — key concerns and solutions* community engagement from July to August 2017, expert analysis, as well as a review of trends occurring across metropolitan Melbourne.

We have incorporated feedback received through various community consultations (refer to diagram on page four).

To inform this *Strategy*, background papers have been prepared, including:

- > *Integrated Transport Strategy Background Data Report*;
- > *Integrated Transport Strategy Case Study Report*;
- > *Integrated Transport Strategy Transport Corridor Analysis*; and
- > *Integrated Transport Strategy Round One Community Engagement Summary Report*.

## BACKGROUND

Glen Eira is one of the highest commuting councils in the state with approximately 80 per cent of our residents working outside of Glen Eira and 60 per cent commuting to work by car. It is clear that many of our residents are regularly stuck in traffic, which can be unproductive, frustrating and stressful.

In recent times, Melbourne has experienced widespread growth in population, which has seen an increase of cars on our roads and community concern regarding traffic congestion has heightened.

Like many inner city areas, Glen Eira has now reaching a critical tipping point, where the existing road network can no longer provide an easy, smooth run for vehicles that have historically made driving attractive.

In fact, based on the ABS Census data, commuting by car has increased from 58.8 per cent in 2011 to 61.1 per cent in 2016, seeing an additional 3,700 Glen Eira residents commuting to work by car over this time.

In regards to car ownership, on average there are 1.6 cars per dwelling in Glen Eira in 2016, which has slightly increased from 2011 where the average was 1.5 cars per dwelling, seeing an additional 2,830 cars owned in Glen Eira over this time.

The *Activity Centre, Housing and Local Economy Strategy* outlines a plan to accommodate an additional 9,000 dwellings in Glen Eira (between 2016–2031).

If the current car commuting rate of 61.1 per cent is applied to the projected working population growth, it is expected that 52,000 of Glen Eira’s residents will commute by car in 2031, which is an additional 7,000 residents commuting by car from 2016.

If the current car ownership rate of 1.6 is applied to these projected additional, it is expected that Glen Eira’s residents will own an additional 14,400 cars. Given Glen Eira residents own approximately 80,000 cars in 2016, the additional 14,400 cars represents an 18 per cent increase.

Put simply, an increase of vehicles on our fixed road network will lead to an increase of congestion and parking concerns.

The draft *Integrated Transport Strategy* seeks to address increasing congestion and parking concerns in two key ways:

### 1. Increase efficiency on key driving routes

Identify the best routes to improve traffic flow and move our car commuters around our city as smoothly as possible.

### 2. Increase walking, cycling and public transport trips

Encourage the increase of non-car trips (walking, cycling, public transport and working from home) by making these options as safe, convenient, fast and attractive as possible.

A goal has been established to ‘strive for a 50:50 mode share of car and non-car trips by 2031’. To achieve this goal, the *Strategy* needs to identify ways to reduce car use by transitioning 640 car commuters to other modes every year for the next 15 years (accounting for the projected population growth).

## FAST FACTS

### TRAFFIC AND PARKING

COMMUNITY FEEDBACK HAS HIGHLIGHTED THAT TRAFFIC AND PARKING ARE MAJOR CONCERNS IN GLEN EIRA

### GLEN EIRA AVERAGES

# 1.6

CARS PER DWELLING\*

# 14,400

CARS WILL BE ADDED TO OUR ROADS BY 2031

IF WE CONTINUE ON THIS TREND\*

# I.0 PRINCIPLES

## PRINCIPLES

### VISION — Glen Eira 2031

Glen Eira will be a City of child friendly neighbourhoods that are connected to a network of vibrant and well designed walkable activity centres. The community will have a range of travel options to service their daily needs, and we will aim to reduce 50 per cent of trips made by car.

**1 Transport is for people — a range of options is needed to suit our busy lives**

Individual travel decisions are influenced by a range of economic, physical, social and psychological factors and these decisions can change daily.

**2 The majority of the community currently relies on the car to undertake their daily activities**

The car plays an important role in the way in which the majority of the Glen Eira community travels on a daily basis. The *2016 ABS Census* reports 61.1 per cent of the Glen Eira community travel to work by car as a driver or passenger (an increase of 2.3 per cent from 2011).

**3 Continued growth of car use will contribute to further traffic congestion and parking concerns**

This growth is unsustainable and as Glen Eira is a middle/inner ring municipality with limited opportunity to increase road capacity, continuing along the trend of increasing car numbers will ultimately lead to a critical tipping point where car travel is no longer an efficient travel choice.

**4 Parking will continue to play an important role and complement our transport system**

The provision of parking is required as motor vehicles, in particular private motor vehicles, will remain for the foreseeable future as the predominant means by which people access goods, services, employment and recreation.

**5 Not all residents within Glen Eira experience the same access to transport**

Glen Eira is a diverse municipality and across the City residents have significantly different levels of transport accessibility.

**6 Peak hour travel movements should be as efficient and fast as possible**

Council owns and maintains all non-arterial roads within the municipality. These roads provide an opportunity for Council to prioritise and plan for the most appropriate and desired road user outcomes.

## **7 Our streets are the defining feature of our neighbourhoods**

Our local streets make up a significant portion of our public spaces and the look and feel defines our neighbourhoods. Streets and routes are and should be treated as important public spaces. We should ensure that these spaces enable safe access for all users.

## **8 Car alternatives can improve our health and the environment**

By encouraging residents and visitors to choose more sustainable methods of travel such as walking, cycling, carpooling and taking public transport, we aim to reduce congestion, improve air quality, improve our health and save money.

## **9 The future presents significant changes and opportunities to reimagine how we move around**

The near future will likely see another once in a century paradigm shift where the transport system will realign with a strong user-first focus; need to be more flexible; and adapt to a fast changing technological environment.

# 2.0 FRAMEWORK

## TRANSPORT ACCESS

By analysing the City of Glen Eira and relevant transport ABS data, it is apparent that we have a City with diverse levels of public transport accessibility. If we look at the City in relation to walking distances to public transport, we can see a clear distinction of four precincts.

### TRAIN AND TRAM PRECINCT

The neighbourhoods located within the northern half of Glen Eira experience excellent access to public transport with access to all three tiers (train, tram and bus). The suburbs include Elsternwick, Ripponlea, Gardenvale, St Kilda East, Glen Huntly and around Caulfield Station.

### TRAM PRECINCT

The neighbourhoods located within the northern half of Glen Eira experience good access to public transport but are not located within walking distances to a train station. The suburbs include Caulfield North, Caulfield South and around Caulfield Park.

The 2016 ABS Census data below shows that residents living close to greater public transport options are less likely to use and own a car. This data shows that aligning key Council policies on development and parking within these four precincts can assist in reducing car use and meeting the 50 per cent car trip target.

Car use				
Glen Eira	61%			
	Train and tram	Train	Tram	Bus
Precinct	51%	59%	61%	68%

Car ownership rates				
Glen Eira	1.6 cars per dwelling			
	Train and tram	Train	Tram	Bus
Precinct	1.3	1.6	1.5	1.7
House	1.6	1.7	1.8	1.9
Apartment	0.9	1.2	1.2	1.6

Car ownership calculations are based on the 2016 ABS data — for further information, refer to Council's *Integrated Transport Strategy Background Data Report*.

## INTEGRATED TRANSPORT STRATEGY FRAMEWORK

Council owns and manages the majority of the street network within the municipality with the exception of arterial roads, which are owned and maintained by VicRoads.

The allocation of road space within these streets is the responsibility of Local Government.

The current approach to street design attempts to balance the needs of all users on all streets, this regularly leads to ineffective outcomes.

Council should set the future direction and preferred uses for these streets. By taking a range of external factors into account (including road widths; local area destinations; and existing connection and function) to determine the best and highest use for the limited road space within the municipality.

The following four premium transit corridors have been developed:

- > efficient driving routes;
- > express public transport routes;
- > safe cycling streets; and
- > great walking and shopping streets.

Each of these mode based street types detailed on pages 18 to 21 have a purpose; set of conditions for success and possible improvements; and an individual network map based on the transport corridor assessment. For further information, refer to Council's *Transport Corridors Analysis Background Report*.

## EFFICIENT DRIVING ROUTES

An efficient driving route is a road or street that aims to ensure the movement of vehicle traffic is as effective as possible.

- KEY ROADS**
- > Nepean Highway
  - > Dandenong Road
  - > South Road
  - > North Road
  - > Warrigal Road
  - > Murrumbeena Road
  - > Kooyong Road
  - > Glen Eira Road
  - > Poath Road
  - > East Boundary Road
  - > Neerim Road
  - > Hotham Street
  - > Grange Road
  - > Jasper Road
  - > Centre Road

## POTENTIAL IMPROVEMENTS

To increase the efficiency of our driving routes, possible improvements may include:

- > creating clearways to enable multiple trafficable lanes in peak hours;
- > removal of level crossings;
- > banning or reducing right hand turns;
- > consistent sign posted speed limits;
- > creation of turning-only lanes;
- > better phased traffic signals for free flow of traffic; and/or
- > exploring the reinstatement of lost street parking where required.

## EXPRESS PUBLIC TRANSPORT ROUTES

An express public transport route is a road or street that aims to prioritise the movement of trams or buses. These modes are the most efficient at moving large amounts of people quickly within limited road space.

### KEY ROADS

- > Balaclava Road
- > Hawthorn Road
- > North Road
- > East Boundary Road
- > Murrumbeena Road
- > South Road

### POTENTIAL IMPROVEMENTS

To increase the effectiveness of our public transport routes, possible improvements may include:

- > separating the service — for example, a bus-only lane or removal of cars from the tram lane;
- > prioritising the service — for example, creation of clearways in peak hours;
- > programming of traffic signals to prioritise bus movements through intersections;
- > construction of accessible tram stops with high quality shelters and signage;
- > improving connections between train stations and interchange facilities; and/or
- > exploring the reinstatement of lost street parking where required.

## SAFE CYCLING STREETS

A safe cycling street is a road or street that aims to enable cycling as a legitimate transport mode choice. These streets foster a safe environment for people of all abilities to cycle safely between destinations.

- KEY ROADS**
- > Inkerman Road
  - > Orrong Road
  - > Bamba Road
  - > Koornang Road
  - > Tucker Road
  - > Nepean Highway
  - > Riddell Parade
  - > McKinnon Road
  - > Thomas Street

### POTENTIAL IMPROVEMENTS

To increase the safety of our cycling streets, possible improvements may include:

- > construction of separated, safe bike paths;
- > continuation of all bike lanes through intersections;
- > minimising car movements across bike lanes at traffic signals;
- > consistently reduce vehicle speeds along roads;
- > ensuring lighting is of a high standard along full length of the streets; and/or
- > exploring the reinstatement of lost street parking where required.

## GREAT WALKING AND SHOPPING STREETS

A great walking and shopping street is a road or street that aims to enable the movement of people for the purpose of walking, shopping and experiencing our activity centres and public places.

### KEY ROADS

- > Centre Road
- > Glenhuntly Road
- > McKinnon Road
- > Patterson Road
- > Neerim Road
- > Balaclava Road
- > Hawthorn Road
- > Koornang Road

### POTENTIAL IMPROVEMENTS

To improve the experience of our walking and shopping streets, possible improvements may include:

- > pedestrian priority at all side street intersections;
- > investigate road closures and shared zones in key locations to improve the pedestrian network;
- > planting high quality canopy trees along roads;
- > ensuring high quality lighting along length of the roads;
- > improving traffic signals to prioritise pedestrians;
- > developing destinational, high value public spaces; and/or
- > exploring the reinstatement of lost street parking where required.

# 3.0 PLACES

The areas between the transport corridors are our neighbourhoods and local streets. These are the areas where our residents live, shop and recreate.

Our local streets make up a significant portion of our public spaces and are significant places in their own right. The look and feel of these streets defines how our neighbourhoods and local activity centres function.

The following three place types have been developed:

- > child friendly neighbourhoods;
- > safe school zones; and
- > walkable activity centres.

## CHILD FRIENDLY NEIGHBOURHOOD

Child friendly residential streets should provide opportunities for diverse experiences and encourage people to spend time engaging in social and recreational activities. All streets should be fundamentally safe for everyone.

### KEY OBJECTIVES

- > Create safe residential streets that encourage walking and social interaction.
- > Design streets where pedestrians, cyclists and vehicles can co-exist safely.
- > Reduce unnecessary 'rat running' within local streets.

### KEY ELEMENTS

- 1 Introduce pedestrian crossing facilities at each boundary road.
- 2 Explore altering the local traffic network to create additional public spaces.
- 3 Create safe local connections with regional safe cycling streets.
- 4 Explore the potential for one-way streets.
- 5 Implement internal traffic calming and additional tree planting.
- 6 Explore the reinstatement of lost street parking where required.
- 7 Improve lighting.

## SAFE SCHOOL ZONES

Safe school zones have a strong focus on accessibility and safety for all users. These zones should provide for a range of safe travel options while not impacting on the amenity of nearby residents.

### KEY OBJECTIVES

- > Provide an environment that encourages active and independent travel.
- > Ensure existing and future amenity of the area when designing movement around a school zone is protected and enhanced.

### KEY ELEMENTS

- 1 Create high pedestrian safety zones around the school with wide footpaths and raised pedestrian crossings and high quality lighting to ensure slow vehicle speeds.
- 2 Provide vehicle drop-off areas in locations that do not affect safety of school users or residential amenity.
- 3 Explore altering the traffic network and temporary road closures to create safe and inviting forecourts into schools.
- 4 Reduce speed limits within pedestrian safety zones.
- 5 Provide high quality bike parking within school zones.
- 6 Create high quality walking streets linking vehicle drop-off areas with school entrances.
- 7 Create safe local connections with regional safe cycling streets.
- 8 Provide protected zones for school children during pick-up and drop-off.
- 9 Explore the reinstatement of lost street parking where required.

## WALKABLE ACTIVITY CENTRE

A walkable activity centre is an attractive and exciting destination that encourages residents and visitors to visit, shop and stay within these precincts, rather than driving to a regional shopping centre. These streets should be designed to balance the needs of the diverse users in order to create an environment that ensures access safety, comfort and enjoyment for everyone.

### KEY OBJECTIVES

- > Provide a safe and comfortable walking environment during the day and night and create attractive places that people want to visit and linger longer.
- > Ensure appropriate parking is provided in suitable locations to support the economic vitality of the shopping strip.

### KEY ELEMENTS

- 1 Widen footpaths to encourage street trading activities.
- 2 Provide consolidated parking close to key driving routes and interactive wayfinding signage.
- 3 Provide adequate public facilities such as toilets, seats and drinking fountains.
- 4 Create high quality pedestrian networks. Explore opportunities to implement shared zones and road closures to create high quality civic spaces.
- 5
- 6 Provide safe, high quality connections between key destinations and public transport nodes.
- 7 Provide needs-based and short-term parking spread throughout the centre.
- 8 Create safe local connections with regional safe cycling streets.
- 9 Explore the reinstatement of lost street parking where required.

# 4.0 POLICIES, PROJECTS AND PILOTS

As Melbourne's population has grown so has our car usage, and our community have clearly expressed that traffic congestion and parking are real problems in our City. Like many inner city areas, we have now reached a critical tipping point, where the existing road network can no longer provide an easy, smooth run for vehicles.

**Our goal of achieving a 50:50 mode split by 2031**

To achieve this 50:50 mode split by 2031 in Glen Eira, this draft *Strategy* aims to reduce car use by transitioning 640 car commuters

to other modes every year for the next 15 years (accounting for the projected population growth).

This draft *Strategy* sets out a range of policies, pilot programs and projects that will enhance livability for all residents, and ensure that we move towards a better transport system that will reduce traffic congestion and parking issues.

## I.0 PLACES

The continued growth of our City presents the opportunity to change how we plan for this growth in our neighbourhoods, as well as the look and feel by making them more sustainable, and people-centered places.

Our streets make up a significant portion of our public spaces and can become significant places in their own right. The look and feel of these streets defines how our neighbourhoods function.

Refer to section 3 of this *Strategy* for details on the three key types of places that make up our City.

### **POLICY I.1** **Focus employment and office development within major activity centres and strategic sites**

The residential density of Glen Eira is relatively high by metropolitan standards and increasing, however the corresponding number of local jobs is low.

Employment opportunities should be focused in areas of existing retail and commercial activity with access to transport modes and links.

Opportunities to address this and create employment clusters need to be factored into any consideration of underutilised sites.

#### **EVIDENCE**

- > **The number of local job opportunities within Glen Eira is low when compared with other municipalities.**
- > **Only 21.3 per cent of working residents are employed within the municipality, making Glen Eira the fifth lowest council across Melbourne to locally employ its own residents.**
- > **Comparable councils such as Bayside and Boroondara have rates in the range of 26.2 to 26.4 per cent.**

### **POLICY I.2** **Support and promote increased dwelling density at key transport hubs**

Transit-Oriented Development refers to a development that is located on or adjacent to a high quality public transport node. The residents of these developments experience high quality public transport access, good walkability and mixed land uses.

Transit-Oriented Development is a key direction to realising the 20 minute city concept adopted by direction 5.1 in the State Government's *Plan Melbourne* strategy.

#### **EVIDENCE**

- > **Council's Activity Centre, Housing and Local Economy Strategy identifies where the major focus for scale and density of housing should occur within the municipality.**

### **PILOT I.1** **Design neighbourhood streets that balance the needs of diverse users in order to create an environment that ensures access, safety, comfort and enjoyment for everyone**

Council will plan, design and implement a pilot concept design for a Glen Eira neighbourhood with the goal of creating safe and comfortable local community spaces.

**PILOT 1.2****Work with a school to develop new ways to encourage behavioural changes and reduce the reliance on car-based transport**

Work with a local school and neighbourhood to implement a pilot safe school zone, as identified in section 3 of this draft *Strategy*.

Implementing a safe school zone will promote accessibility and safety for all users and drive behavioural change within the school community, towards making riding and walking to school normal for all children once again.

**PROJECT 1.1****Develop Street Design Guidelines**

*Street Design Guidelines* offer a set of principles and aspirations to help guide and support the appropriate development of current and future streets within the municipality.

A focus of the *Guidelines* is to design for safety and mobility while treating streets as public spaces.

**CASE STUDIES****Perth City Link — Transit Oriented Development**

Perth City Link is an urban renewal project managed by the Metropolitan Redevelopment Authority with the aim of reconnecting the Perth CBD with the northern neighbourhood of Northbridge. By sinking the railway line and Wellington Street bus station, the project aims to create a 13.5 hectare space for residential and commercial uses.

It is expected the area will be transformed with quality designed buildings, inviting public spaces, improved connections across the city and creating homes for 3,000 new residents.

**Barcelona superblocks**

In 2015 selected neighbourhoods in Barcelona, Spain were converted to a superblock to test and pilot a new urban design initiative to encourage walking, cycling and neighbourhood safety.

In order to create a superblock, select streets were cut off to through-traffic, and four new public squares of 2,000m<sup>2</sup> each were created.

The concept works by limiting the number of roads that cars can use to cross the city. Through traffic is permitted only on roads around the perimeter of each superblock, where new bus lines are installed. The streets within the block have a low speed limit and allow access only for local residents, delivery vehicles and emergency services.

Once this system is in place, the less car-encumbered streets are redesigned, extending pedestrian space and allowing for amenities such as playgrounds and cycling links.

## 2.0 PEOPLE

Transport is fundamental for people, therefore a range of transport options is needed to suit our busy lives.

Individual travel decisions are influenced by a range of economic, physical, social and psychological factors and these decisions can change daily.

Initial community consultation has demonstrated that our community members have differing needs and wants when it comes to how they travel now and into the future. They want the freedom to choose from a range of options to meet their daily travel needs.

### **POLICY 2.1**

**Ensure meaningful engagement with the community and involve the community and stakeholders in all transport projects**

Ensure that all transport projects include best practice community and stakeholder engagement during the project scoping and inception stages.

Community feedback received throughout the development of this *Strategy* and other work completed by Council has made it clear that our residents are engaged and informed.

As such it is important to ensure that all transport projects include significant and meaningful community and stakeholder engagement.

### **POLICY 2.2**

**Plan for all members of the community and ensure that universal design principles are embedded into all projects, policies and programs**

All projects, policies and programs should be designed to ensure universal design principles are embedded within the early stages.

Many Australians will experience a form of disability at some stage of their lives as a part of the normal human life cycle. Physical and non-physical barriers within the built environment can have a substantial impact on freedom of movement.

Council should work towards achieving a fully accessible and inclusive municipality where all residents, regardless of their ability, can reach their full potential and lead fulfilling lives by adopting a universal design approach.

Universal design is the design of products and environments to be usable by all people, to the greatest extent possible, without the need for adaptation or specialised design.

## CASE STUDIES

### Neighbourhood Project — CoDesign Studio

The *Neighbourhood Project* aims to help communities bring different projects to life as well as working with Local Government to help embed lasting changes that support active and inclusive neighbourhoods. The aim is to also build capacity in the community.

The first round of projects involved three councils: Hobsons Bay City Council, City of Whitehorse and Cardinia Shire Council. A variety of community-led projects have emerged from the program allowing the community to take ownership of the plan and direction of their neighbourhood projects.

Originally developed as temporary projects, many are now being implemented permanently due to their success.

### Yarra Trams Accessibility Action Plan

Yarra Trams has led the way in developing an *Accessibility Action Plan* to adapt and improve the service delivery for all users of the network.

Yarra Trams has a vision to transform Melbourne's tram network into a modern light rail system offering world class services to all passengers. An important part of this vision is providing a network that is accessible to everyone and a positive customer experience for people with a disability or mobility restriction, and older people.

Plans include an accessible-only low floor tram fleet and increased accessible tram stops at all major destinations.

### 3.0 MOVEMENT

Glen Eira is a diverse municipality and across the City residents have significantly different levels of transport accessibility.

The northern half (built before the car) is well placed with a range of transport options (including train, tram and bus) and the CBD is within comfortable cycling distance.

The southern half has been built with a heavy reliance on cars. Train stations are further apart, there are no trams, and cycling into the CBD is not a comfortable option.

The 2016 ABS Census revealed that 61 per cent of Glen Eira residents travel to work each day by car. This has increased from 58 per cent in the 2011 ABS Census.

Identified within section 2 of this draft Strategy are four mode-based route types:

- > efficient driving routes;
- > express public transport routes;
- > safe cycling streets; and
- > great walking and shopping streets.

The prioritisation of these routes will become increasingly important as the Glen Eira population increases and with it the demand for limited road space.

Efficient, accessible and safe movement are essential to developing a great transport system.

Car	61%
Train	18%
Didn't go to work	8%
Worked at home	6%
Walked only	2%
Tram	2%
Bicycle	2%
Bus	1%

Source: 2016 ABS Census  
— method of travel to work

#### POLICY 3.1

##### Advocate for improved public transport in areas that are identified as lacking options

Improved access to public transport provides a range of benefits including:

- > increased independence and mobility for the young and elderly;
- > reduction of pollution and car congestion; and
- > improved health and wellbeing outcomes.

In line with section 2 of this draft Strategy, advocate to the State Government for increased public transport provisions and service quality across the municipality.

#### POLICY 3.2

##### Advocate for the removal of the remaining level crossings

Road and rail crossings present major barriers to creating an efficient and safe transport network. The removal of these crossings provides opportunities to increase the road efficiency and also enhance the local areas with placemaking and urban renewal. Glen Eira is fortunate to have had the majority of our level crossings removed with only two remaining crossings within Glen Eira — Glenhuntly Road and Neerim Road. Council will advocate to the State Government to have these both removed.

**PILOT 3.1****Improve efficiency of existing road network on key driving routes**

It is important to recognise that the car plays an important role within the Glen Eira community and will continue for the immediate future. Council will seek to improve car-based travel on select roads by implementing some of the improvements suggested in the efficient driving routes analysis.

**PILOT 3.2****Design and implement a public transport corridor improvement project**

High quality public transport services are associated with high usage rates and are able to move more people than private vehicles. Any transport infrastructure improvement projects should be based on their ability to significantly improve journey times and ease of use.

**PILOT 3.3****Plan and design a pilot cycle corridor improvement project with a protected cycleway to encourage an increase in cycling**

While cycling and walking may not be a viable option for commuting for many of the Glen Eira residents, there are opportunities for short car trips to be swapped for walking and cycling options. It is important to provide a safe and inviting environment for cyclists of all ages and abilities to ensure that active transport is an easy and convenient part of our daily lives.

**CASE STUDIES****Punt Road Clearways**

In August 2016, VicRoads implemented 24/7 clearways along Punt Road in order to improve traffic flow along one of Melbourne's most congested roads. It was identified that parked cars contributed to high levels of congestion and were an opportunity to create an additional traffic lane.

VicRoads identified the following benefits from implementing the 24/7 clearways:

- > improved safety along Punt Road;
- > relieved congestion and got traffic flowing again outside of peak periods and on weekends; and
- > provided more reliable journeys for people commuting by bus and tram.

**Waltham Forest — Mini-Holland Program**

The Mini-Holland program, as part of the Mayor of London's Healthy Streets agenda, aims to make boroughs as cycle-friendly as their Dutch equivalents — where more than half of all journeys are via cycling. All road users will benefit from these improvements to the streets and better facilities for pedestrians. Changes include:

- > slowing down vehicles on residential streets, discouraging non-local traffic from cutting through the area and prioritising pedestrians at junctions; and
- > proposing changes such as: protected separate spaces for people to cycle in, new facilities for public transport users and new crossing points for pedestrians and cyclists.

Provisional results reveal an overall traffic reduction of 16 per cent, no reported collisions and an increase in cycle participation in adults and children.

## 4.0 PARKING

Parking is an ongoing issue across many parts of Glen Eira including activity centres, local streets and around places of interest.

Throughout the development of this *Strategy*, a common concern received from both traders and the community was the desire for increased activity centre-based parking.

The provision of public parking is required to support daytime shopping within our retail centres, as vehicles will remain (for the foreseeable future) as the predominant means by which our residents access goods, services, employment and recreation.

The demand for car parking within many of our activity centres is high, as shown below.

### Activity centre parking occupancy rates

Centre	4 hour peak occupancy
Carnegie	96%
Bentleigh	91%
Elsternwick	78%

#### POLICY 4.1

##### Develop and implement parking overlays to contribute to the development of public parking within our centres

As noted throughout completed parking studies, our major activity centres experience near capacity public parking occupancies. This is due to a range of factors including the rapid rate of development and land use change; and our centres becoming highly destinational attracting a significant numbers of trips from outside the local area and the municipality.

As there is a noted short-fall in public parking supply, the implementation of a parking overlay will be developed to allow financial contributions (or ‘cash-in-lieu’ payments) to be paid in place of providing car parking spaces. These financial contributions will then form a fund used to construct additional public parking within our centres.

#### POLICY 4.2

##### Incentivise and encourage office and employment development in major activity centres by exploring the review of statutory parking requirements

Council’s *Activity Centre, Housing and Local Economy Strategy* identifies that employment opportunities should be focused in areas within strategic sites within major activity centres and along high quality transport corridors.

Where it is demonstrated that office parking usage is lower than the planning scheme requirements due to the high level of public transport provision, explore a reduction in the statutory parking requirements for office use.

When determining appropriate parking rates, the site specific conditions of the development and the corresponding ability for the centre to adapt to an increase mode share of sustainable travel, should be taken into account.

#### POLICY 4.3

##### Incentivise and encourage preferred land uses that provide night-time activity within activity centres by exploring the review of statutory parking requirements

Community consultation has indicated that there is a want for more local shops, bars and events to open later into the evening.

The *Activity Centre, Housing and Local Economy Strategy* identified that vibrant night-time and weekend activity is a priority.

Where it is demonstrated a public parking availability is underutilised during the evenings, explore a reduction in the statutory parking requirements for these commercial uses.

When determining appropriate parking rates, the site-specific conditions of the development and the corresponding parking utilisation of the centre should be taken into account.

**PROJECT 4.1****Develop a municipal Parking Policy that emphasises equitable access to public parking**

The issue of residential street parking has long been a polarising one and contributes to anguish within our community. Our approach to residential parking policy will be evidence-based and designed to maximise the use of existing spaces.

Responsible and consistent provision, permit, restriction and enforcement systems will increase equity as well as certainty for residents, visitors, businesses and developers. Integrated planning will also provide opportunities to use the *Parking Policy* to encourage mode shift and promote preferred land uses.

**PILOT 4.1****Encourage efficient use and innovative management approaches to commercial parking within new developments**

By encouraging an innovative approach to activity centre-based commercial car parking, there are opportunities to provide additional public parking in areas where it is most needed.

Shared parking is a concept that takes advantage of the fact that most private parking spaces are only used part-time by a particular motorist or group. Many parking facilities have a significant portion of unused spaces, with utilisation patterns that follow predictable daily, weekly and annual cycles.

By exploring and trialing a shared parking pilot within one of Glen Eira's major activity centres, we hope to enable these parking facilities to be used more efficiently by allowing these commercial parking spaces to be shared by multiple users.

**CASE STUDIES****Auckland Council car park**

The most common form of shared parking is publicly accessible parking buildings, as provided in many CBD environments. These buildings allow parking spaces to be shared between multiple users. They may be either publicly or privately-owned but operate most effectively with some form of public sector governance.

Within suburban contexts, the multi-storey public car parking building in New Lynn, Auckland is an example of a shared parking facility, managed by a public authority within a private development.

The project was instigated by government investment in trenching a surface railway, freeing up land previously used as a bus interchange and surface car parking. A mixed-use development was delivered by private developers incorporating a four storey 300 space public car park and 7,000m<sup>2</sup> of retail and commercial space including a health centre and a residential tower with 110 apartments.

**Atkinson Street — multi-deck car park**

The City of Monash recognised the need for extra car parks within the Oakleigh activity centre (a highly desirable retail and hospitality location), especially during peak periods when existing car parks are 100 per cent occupied.

In August 2016, the City of Monash started construction of the new multi-deck car park in Atkinson Street, Oakleigh. This \$7.5 million extension of an existing ground floor car park created a 274 space car park in the centre of Oakleigh, boosting parking in Oakleigh by 195 spaces.

## 5.0 TECHNOLOGY

Transport technologies are changing at a faster rate each year — delivering a range of opportunities and obstacles for Council to overcome.

When it comes to transport technology, Glen Eira has the opportunity to become a smart city. With the ability to utilise these new technologies and big data to increase planning performance and residents' wellbeing, we can increase our ability to respond to local, national and global challenges.

Big data includes things such as bus and rail vehicle occupancy data, real time car parking data, local weather and air quality data, traffic speed and count data from roads, and real time infrastructure condition status.

### **POLICY 5.1**

#### **Quickly respond to changing transport technologies**

In the future we will see another once in a generation paradigm shift where the transport system will:

- > realign with a stronger user-first focus;
- > need to be more flexible; and
- > quickly transform and adapt to an ever-changing technological environment.

To ensure we take advantage of these opportunities, we must respond efficiently. Council needs to proactively access new and emerging transport technologies and assess their benefits against the *Glen Eira Council and Community Plan* objectives in order to determine policy positions.

### **PROJECT 5.1**

#### **Develop a transport data action plan to equip Council to better measure, collect and analyse transport data to guide decision making in the future**

Good quality transport data is critical to planning and managing transport within our cities. It is important to document transport activity that is taking place in support of economic and social development.

As new transportation technologies emerge, innovative companies are collecting detailed, street-level data in real time on everything from traffic speeds to transit use. Most cities around the world are not equipped to measure, collect and importantly analyse this data.

The potential benefits of big data for transport planning are improved knowledge; high standards of customer service; and high quality planning.

### **PILOT 5.1**

#### **Support and encourage electric cars**

Council will support electric cars within the municipality. The benefits of transitioning to electric cars include:

- > zero emissions;
- > reduction in noise; and
- > low maintenance.

Council will explore opportunities to take the lead on electric cars. This could include:

- > piloting electric cars as part of the Council fleet; and
- > providing charging stations at Council offices.

## CASE STUDIES

### Dockless bike share

Dockless bike share is a new business model that allows people to access a fleet of bikes through a smartphone app. Bikes can be used for return or one-way trips and don't have to be returned to a docking station.

### Mobility as a service

Describes a shift away from personally owned modes of transportation and towards mobility solutions that are consumed as a service.

This is enabled by combining transportation services from public and private transportation providers through a unified gateway that creates and manages the trip, which users can pay for with a single account.

### SharedStreets

SharedStreets is a collaboration between National Association of City Transportation Officials, the World Resources Institute, and the Organisation for Economic Co-operation and Development's *International Transport Forum*. Together they are developing a digital commons for streets — a universal language for communicating information about city streets and a launching pad for public-private collaboration and data exchange.

This will include:

- > road safety data;
- > real time parking and congestion data; and
- > integrated public transport scheduling.

### Strava Metro

Strava is a GPS-based activity tracking app that lets users track their travels, workouts, bike commutes, and steps. It also has a division called Strava Metro that gathers the anonymised data from millions of bike rides and uses it to find patterns on how, when and where people ride.

It is now sharing that data with transportation departments in cities around the world, with the goal of improving street infrastructure.

Strava Metro data enables deep analysis of cyclist and pedestrian activity including popular or avoided routes, peak commute times, intersection wait times, and origin/destination zones. Metro processes this data for compatibility with geographic information system (GIS) environments.

Key features include:

- > street activity counts across the entire network;
- > origin and destination surveys; and
- > activity counts and wait times at intersections.
